

PRODUCT FACT SHEET

WHAT IS ALTITUDE O2?

This formulation is unique in its self, our Scientific and Research and Development team have been able to extract 3 molecules previously undiscovered from the most potent blood building peptide family.

This is the latest development in the equine and camel industry and is one of the most potent blood builders available today.

HOW DOES IT WORK?

Altitude O2 Increases the amount of red blood cells as well as increases the oxygen carrying capacity of the blood to deliver more oxygen to the exercising muscles during racing or competition.

WHY USE?

The extra oxygen significantly increases the muscles' energy production and can therefore help to significantly improve athletic performance and output ability; higher intensity and longer duration and therefore the winning edge. As this is one of the latest products in the equine and camel industry and is one of the most potent blood builders available today, every performance animal needs to be taking it.

SIZE

Altitude O2 packaging comes in a 6x10ml vials

ADMINISTRATION AND DOSAGE

Give 5ml of Altitude O2 weekly intravenously if racing give 5 days before event.

STORAGE

Store below 25C (Air conditioned)
