

PRODUCT FACT SHEET

WHAT IS TB-1000?

TB-1000 is a peptide which is applied by subcutaneous injection to promote angiogenesis, wound healing muscle growth. It has demonstrated cardio protective and immune-potentiating effects, as a potent anti-aging, and has anti-scarring properties.

TB-1000 is a synthetic version of the naturally occurring peptide present in virtually all human and animal cells first located in the Thymus gland in 1981.

The potency of Thyrosin Beta 4 present in TB-1000 is approximately 99%, the highest of its kind. An additional key factor of TB-1000 is that it promotes cell migration through a specific interaction with actin in the cell cytoskeletal. It has been demonstrated that a central small amino acid long actin binding domain has both blood cell reproduction and wound healing characteristics. These characteristics are uncovered by accelerating the migration of endothelial cells and keratinocytes. It also increases the production of extracellular matrix-degrading enzymes.

HOW DOES IT WORK?

In angiogenesis and in wound healing, TB-1000 acts by accelerating the migration of blood vessel cells and skin cells and increasing the production of extracellular matrix-degrading enzymes.

It has also been shown to stimulate epidermal stem cell differentiator. When applied by subcutaneous injection, it assists in the generation of new blood vessels and aids wound healing by promoting skin cell regeneration.

WHY USE?

In performance animals, as in all animals, the benefits include faster and better wound repair, and faster recovery from injury. Trials to date indicate faster recovery time (wear and tear) from training, increased muscle girth, increased muscular endurance, increased muscular strength and increased energy levels.

SIZE

TB-1000 is available in boxes of 6 x 20 mg vials. Each vial contains 20 mg of Thyrosin derivative selected chain.

ADMINISTRATION AND DOSAGE

TB-1000 is administered by way of subcutaneous injection. It can be applied by any competent person, however, it is preferably administered by a qualified veterinarian.

Give 1 vial per week for 6 weeks.

STORAGE

Store below 25C and protect from direct light

TB-1000

Specifically manufactured for elite horses and camels

TB-1000 is a synthetic version of natural occurring peptides found in horses, camels and other high performance animals. Its regenerative properties help the body heal itself and build up strength naturally. The TB-1000 formulation is chemical free with no side effects, and is suitable for thoroughbred race horses, show jump horses, dressage horses, rodeo horses and polo horses as well as racing camels. In fact all high performance animals can benefit from TB-1000 as it provides rapid surface wound healing with little or no scarring. Discomfort for the animal is minimal while the benefits of rapid healing are easily in evidence.

The use of TB-1000 peptides for horses also enhances their energy levels, improves muscle tone and provides increased muscular endurance. Additionally, there is a decrease in recovery time from training which is why the use of TB-1000 peptides is endorsed by leading owners, trainers and stables around the world.

Benefits:

- Increased Muscle Growth
- Increased Energy Levels
- Improved Muscle Tone
- Increased Muscular Endurance
- Muscle Spasm Relaxation
- Enhanced Tissue Repair
- Reducing Joint Inflammation
- Build Cardiac Muscle
- Helping Maintain Flexibility
- Decreased Recovery Time from Training and Racing
